PAMPANGA STATE AGRICULTURAL UNIVERSITY MAGALANG, PAMPANGA RECEIVED DATE: 2.19.26 TIME: 8:20 BY: RECORDS UNIT 0471

Dr. ANITA G. DAVID
University President

Ma'am/Sir:

This is to respectfully submit a narrative report on participation to the seminar/training entitled **"51st GEPI Regional Convention - Advancing Geodetic Excellence Through Innovation and Integrity"** held on **Feb. 13-14, 2026** at **Royce Hotel and Casino, Clark Freeport Zone, Clark, Pampanga**.

- **Highlights of the training/activity**

The first day commenced with an opening ceremony, the declaration of the convention's opening, and the presentation of delegates. The event started with a motivational talk about how important Geodetic Engineers are in measuring land and planning out our cities and communities. After that, the Keynote Speaker reminded everyone that while using new technology is great, doing honest, high-quality work is what matters most. To wrap things up, the National President shared what the group has achieved lately and talked about the exciting plans they have for the future.

The technical sessions began in the afternoon, covering essential topics. Plenary Talk 1, entitled "CAAP Height Clearance Application Procedures," was presented by Engr. James Dexter A. Grageda and Engr. Lymariz A. Sevallos. The session provided a clear walkthrough of the safety requirements and paperwork needed to clear building heights with aviation authorities. This was followed by Engr. Richard Brian M. Cepe, who discussed "BCDA Issues and Concerns on Geodetic Engineering Services". He focused on common challenges and coordination gaps when working on projects under the Bases Conversion and Development Authority. The next topic entilted "AEW Issues and Concerns on Geodetic Engineering Services," was then delivered by 1st Lt. Donald Harris H. Domin-ong, who shared insights into how engineering services interact with aviation and military zones. The focus shifted to technical precision and professional conduct. In Plenary Talk 4, titled "GNSS RTK Relocation Survey Procedures and Ethical Standards," Engr. Danica P. Noveloso highlighted how to use modern satellite-based survey tools properly while maintaining integrity in the field. Finally, the first day of the convention was concluded with Plenary Talk 5, where Engr. Estrellita C. Bordallo discussed "WEN Concerns on Relocation Surveys and Ethical Standards". This final session reinforced the importance of following high ethical benchmarks specifically when dealing with land relocation disputes and surveys and the struggles of female geodetic engineers in the society.

The second day began with a plenary session where regional board presidents presented their accomplishments, followed by the election of new officers. Engr. Melanie S. Suyu was elected as one of the GEP Regional Officers for 2026-2027. The afternoon continued with informative discussions,

p 103

starting with Plenary Talk 6, where Mr. Eleador F. Balgos and Engr. Jonathan C. Francisco discussed issues and concerns regarding geodetic engineering services within the DHSUD. The key takeaway from this talk was the importance of aligning survey services with housing and urban development standards to avoid delays in project approvals. This was followed by Atty. Bayani Maniquis, who provided valuable Register of Deeds insights on Supreme Court decisions affecting survey plans. His session emphasized how recent legal rulings change the way survey plans must be prepared to be legally valid. The focus then shifted to professional protection as Police Colonel Grant Gollod explained the procedures for handling illegal practice and entrapments. The essential lesson here was how engineers can work with the police to catch and stop unlicensed individuals from performing engineering work. Finally, Atty. Darwin C. Reyes concluded the sessions by discussing the legal side of prosecutions related to illegal practice in the profession. He highlighted the necessary legal steps and evidence required to successfully take court action against those violating professional laws.

Also, Engr. Melanie S. Suyu and Engr. Joseph Froilan V. Alforte served as the Masters of Ceremony during the 2-day convention event.

- **Plan of action for knowledge sharing**

To effectively share the insights gained from the convention, a seminar will be organized for students to discuss key takeaways regarding the regulatory and legal aspects of the profession. This session will focus on practical procedures such as CAAP height clearance applications and aligning survey services with DHSUD and BCDA standards to ensure project success. Additionally, the seminar will cover critical professional protections, including how to handle illegal practice and entrapments. These essential topics will also be integrated into classroom discussions to bridge the gap between academic theory and real-world field operations. By sharing these updates, the goal is to increase student awareness of their future roles and the ethical standards required to protect the integrity of the Geodetic Engineering profession.

- **Recommendations**

To make future convention even better, it is recommended to include more real-life examples and group talks where everyone can join in and share ideas. It is also important to get more young professionals involved to help inspire the next generation of geodetic engineers.
